WPI Acc No: 1998-068536/199807

Dummy solar light irradiation apparatus for acceleration deterioration testing purpose - includes angle adjustment unit with which air mass filter is tilted to adjust its angle with respect to optical axis of

light emitting by xenon arc lamp Patent Assignee: WAKOMU DENSO KK (WAKO-N)

Abstract (Basic): JP 9306201 A

The apparatus includes an air mass filter (11) which removes a near IR component from the emission spectrum of a xenon short arc lamp (1).

The air mass filter is tilted to adjust its angle with respect to optical axis of the emission spectrum from the arc lamp by an angle adjustment unit.

ADVANTAGE - Duplicates spectral distribution of natural solar light with high precision with single source. Improves accuracy of spectral

distribution.
